

Woolie Instructions for Ewe to make your own Dryer balls.

If you choose to sell you dryer balls , the name Tumblin Woolies™ belongs to Spinderellas. Thank Ewe.

These were instructions we sold in a kit containing 8 ounces of wool.

Divide your wool into 2 ounce sections using a scale or try to divide your wool as evenly as you can. The amount of wool can vary, it will determine the size of the finished wool ball.

Also the type of wool used can make a difference on the size they felt down to.

If using alpaca, we do not suggest 2nds with guard hair as they do not felt and will work their way out of the ball onto your clothing. Do not use double coated sheep since the guard hair will not felt either.

Grab a piece of roving about 15” -24
“ long and untwist it so it is flatter.
You will be using sections of the
roving to wrap around and around
into a ball.

If using the covered cord
Use it here and follow instructions.

Start with a light section and place over two
fingers, begin to wind the roving around your
fingers a few times.

Or use odds and end yarns or fiber and make
into a ball to form a core. Then follow
instructions with the wool to the end.

When you have built up the roving a
little bit, take your fingers out of the
center and begin to wind , going all
over the start of your roving, forming
a ball, like you would wind a ball of
yarn. Make sure you are keeping the
roving flat so it will felt better.

When your roving pieces are finished, you should have a large ball that looks something like this.

Take an old cotton tube sock, making the “outside in”, and place the ball into the sock.

Do not use stockings or you will have a harder time getting them out of the stocking, since they will felt to the fabric- kind of like nuno felting.

Fill your washer with hot water and add a load of clothes or a few old towels. We like to use old white towels and hot water and soap. You will place your socks into the wash cycle and run it a few times to felt the balls.

We dry our “Woolies” in the dryer in the sock- (go figure – lol) or you could take them out of the sock and lay them on a screen to dry- but we think that takes to long.

Make as many as you want- they will shrink and be firm- just pop them into your dryer and either leave them there, which is what we do, or place them into a bag for storage.

Downy wool works the best, as hair fibers tend to “shed” on your clothing in the dryer.

You can always wash the ball in the washing machine when they seem to have too much static electricity.

The dryer balls will last for years!
The more you use in your dryer the faster the clothes will dry.

You are now ready to use your dryer balls. They really last FOREVER!!! We have used the original 3 balls for the last 5 years. When they seem to lose their effectiveness simply put them back into the washer with a load of clothes and back into the dryer. The more dryer balls you use, the faster your clothes will dry.

These are the instructions we put on the back of our packaging:

Tumblin' Woolies

"Environmentally Friendly Dryer Sheeps"

Are you looking to reduce your footprint?

Do you hate using chemicals in your laundry?

Are you looking for an all natural alternative to dryer sheets and fabric softener?

Then give our 100% wool - Tumblin Woolies a try.

Tumblin' Woolies are made from 100% USA sheep wool and are hand crafted in SLC, Utah. No two Woolies will look alike. They are all natural, containing NO DYES and will last well over a year !

You may save up to 45% drying time for a load of clothes using only 3 Tumblin' Woolies.

The more Woolies you use, the faster the drying time and that saves time and money.

Tumblin' Woolies circulate & separate the clothing, thereby reducing drying time, softening fabrics, cutting down static and decreasing lint and reducing wrinkles. They are a great alternative to conventional dryer sheets which may contain toluene and strene ; two solvents know to cause cancer and damage the neurological system.

Wool is biodegradable making them great for the environment.

To Use: Take your Woolies out of the bag & place all 3 in the dryer. Use a lower heat setting and less drying time than you are used to. Add a few drops of essential oil to 1 Woolie to scent your clothes if desired. Should your Woolies loose their antistatic properties, simply put them in a load of wash and put back into the dryer.
